

# September 2018 I-TEC Update

1. Kibuye PowerPac providing life saving power
2. Sept 22 the next team leaves for Nundu, DR Congo
3. Start of next PowerPac for Hope Africa University

International Technical  
Electric & Construction

Still a few items that need to be finished but overall, the Kibuye Hope Hospital is now on Solar with battery back up. This will provide perfect voltage 24/7. A recent BIG lightning strike is requiring a return visit to make repairs.

I-TEC, I am happy to report that your handy work over here is paying off in great dividends. I just got the attached picture and a text yesterday from our pediatrician who said, **“The PowerPac saved this baby’s life - came in at midnight with a low temp of 93.2F, low oxygen of 55%, and 1.3kg. Because Power was on, we could immediately put him in an incubator and start oxygen from the concentrator. Thanks!”**

Your prayer and financial support is so critical to the success of these projects and we thank God for each one of you. I am anxious to share with you in the months to come the exciting path that God is taking I-TEC on and the additional Associate team members he is bringing to us.

The Nundu PowerPac has been secured and waiting for many months, and now the I-TEC team will travel to the Hospital located in the Democratic Republic of Congo (DRC) to complete the install. Several delays brought us to this point but we are trusting God to prepare the way and not only provide for the installation of the PowerPac but for the first time, I-TEC will install a complete water purification system provided through **Water Mission in Charleston SC. Please pray for this team of 7 men the end of September early October 2018.** We will highlight the results next *month*.

Galatians 6:10
